Asthma Toolkit for Louisiana Schools

Resources for students, parents, teachers, nurses and school leaders

DEPARTMENT OF HEALTH AND HOSPITALS
Asthma Management and Prevention Program
This toolkit was created with guidance from the Louisiana Asthma Surveillance Collaborative in partnership with the Louisiana Tobacco Control Program and public information officer Jeremy Bridges.
MEMORANDUM

TO: Parish/City School Superintendents  
State Director of Special School District  
Administrators of Type 2 and 5 Charter Schools  
Superintendent of Recovery School District

FROM: Donna Nola-Ganey, Assistant Superintendent  
Office of School and Community Support

DATE: August 16, 2010

RE: Louisiana Asthma School Toolkit

The Louisiana Department of Education has a long standing collaborative relationship with the Louisiana Department of Health and Hospitals and supports programs and initiatives focused on improving the health of Louisiana’s children and youth. In the United States, approximately 2 in 15 children have been diagnosed with asthma before they reach 18 years of age. Asthmatics in Louisiana face a higher risk of death from asthma than fellow asthmatics nationwide. One in ten Louisiana households with children have at least one child with asthma.

The enclosed guide was developed by the Louisiana Surveillance Collaborative and Louisiana Asthma Management and Prevention Program. This guide is intended to provide school personnel with information and practical ways to help students with asthma come to school each day to learn and participate in activities. The goal of increasing asthma education in schools is to improve school attendance and keep students in classrooms, where they can learn.

The guide includes information on:
- Tips for controlling asthma, information on asthma attacks and what to do during an attack
- Information for physical education teachers and coaches concerning asthma
- Current laws to provide students access to asthma medications and device usage
- Sample Asthma Action Plans and asthma protocols for use at schools
- Information on improving indoor air quality at school

Although asthma cannot be cured, it can be controlled. Schools can help by being supportive of students and staff with asthma; adopting asthma-friendly policies and procedures; and providing asthma education for students and staff. If you have any questions or concerns, please feel free to contact Raegan Carter Jones at 225-219-0363 or you may call the Department’s toll-free number, 1-877-453-2721. For further information or to make comments, please contact the Louisiana Asthma Management & Prevention Program, 628 North 4th Street, Baton Rouge, LA 70802, (225) 342-2657 or www.asthma.dhh.louisiana.gov/.

(Increasing Self Management Education for the Student in the School Setting)
Overview
This toolkit is intended to assist schools that are planning and/or maintaining an asthma management program. This guide provides follow-up steps for schools that currently identify students with asthma through health forms or emergency cards or plan to do so. It is designed to offer practical information to school staff members of every position.

Asthma is a leading cause of school absenteeism. Asthma is one of the leading causes of school absence due to illness. Approximately 9.2 million children younger than 18 years of age have been diagnosed with asthma in their lifetime; 3.2 million or approximately 6 percent of children ages 5 to 17 had an asthma episode (attack) in the preceding year (2001 NHIS data).* School staff members can play an important role in helping students with asthma manage their disease at school.

Why Be Concerned About Asthma at School?
As the figure shows, about 3 students in a classroom of 30 currently have asthma. Uncontrolled asthma can result in reduced performance for the child with asthma and disruptions for the entire classroom.

Students with asthma can function to their maximum potential if their needs are met. The benefits to students include better attendance; improved alertness and physical stamina; fewer symptoms; and fewer restrictions on participation in physical activities and special events, such as field trips, and fewer medical emergencies. Schools and their staff can work together with parents or guardians, students, and health care providers to minimize risk and to provide a healthy and safe educational environment for students with asthma. Good health and safety are prerequisites to academic achievement.

On average, 3 children in a classroom of 30

are likely to have asthma. 4

Dear ____________________:

The ____________________________________________________________ School of the
_________________________________________________________ school district understands that in
order for students to excel academically in our district, they must have a safe and healthy environment in
which to live, learn, and play. We feel that a partnership between the school and parents will ensure that the
student has a healthy environment where he or she learns. Our school is currently working with the
Louisiana Department of Health and Hospitals (DHH) Asthma Management and Prevention (LAMP)
Program to decrease environmental triggers that can affect students living with asthma and ensure that
parents have the necessary documents in place to allow the school to better respond to the student’s need.

In order to provide the best possible school asthma management for your child, please assist us by doing the
following:
1. Obtain, from the school nurse, an asthma management plan or asthma action plan—a
physician’s/healthcare provider’s statement of your child’s treatment goals, medication, and peak flow plan,
and environmental risk reduction measures.
2. Submit the Medication Administration form for any medication that is administered in school, signed by
your physician, to allow the student to carry and administer their asthma inhaler and epinephrine pen.
3. Maintain communication with teachers regarding absences caused by asthma.
4. Prepare your child. Discuss and rehearse the medication plan, how to handle symptoms, triggers, food
restrictions, and school policies.
5. Keep your physician up to date on the needs of the school nurse.

*Remember to obtain an Asthma Action Plan and Medication Administration form from the school
nurse.*

Thank you for working with us to assist your child.

Sincerely,

Principal/School Nurse
What is Asthma?

Asthma is a serious chronic lung disease that can be controlled by taking medicine and making changes in your environment even though it cannot be cured. The basic cause of asthma is not yet known, but it tends to run in families. It is common in children or adults with allergies and if not treated correctly, can result in death. Currently, 12% of children in Louisiana have asthma and it is the number one reason children miss school.

What Causes Asthma Events?

Triggers such as allergies, colds, tobacco smoke, or exercise can cause asthma episodes. Eighty percent of people with asthma have allergies to airborne substances such as:
- trees
- grass
- weed
- mold
- animal dander
- dust mites
- cockroach particles
- tobacco smoke

Children who have high levels of cockroach droppings in their homes are more likely to have childhood asthma than children whose homes have low levels.

The Main Signs and Symptoms of Asthma are:

Asthma episodes rarely come on suddenly. Often there are clues or early warning signs that an episode may occur. Some early warning signs may be runny nose, coughing, shortness of breath, inability to sleeping at night, inability to exercise, prolonged respiratory infections, or a decrease of lung capacity.

The main signs and symptoms of asthma are:
- coughing
- shortness of breath
- wheezing
- tightness of the chest
- waking up at night with symptoms
- coughing with exercise
- coughing more than 2 weeks or wheezing after viral infections

Visit our website at: www.asthma.dhh.louisiana.gov
What Happens During An Asthma Attack?

*During an asthma episode a person has hard time breathing because:*

- The lining of the airways becomes swollen
- The muscles around the airways tighten, making the airways smaller
- Thick mucus forms, blocking small airways

**Warning Signs of an Asthma Attack**

- Breathing very quickly or hunched over
- Severe wheezing
- Nostrils open wider with each breath
- Hard time walking, talking, or eating
- The skin between the ribs is pulled tight
- Lips, skin, or fingernails are blue
- Quick relief medicine isn’t working after 20 minutes

**How to Avoid an Asthma Attack**

- Refer to your asthma action plan developed by your doctor
- Take your quick relief medication as need or prescribed by your doctor
- Asthma episodes may be prevented by avoiding asthma triggers and taking a controller medicine, if prescribed by your doctor
- If your or your child’s asthma action plan includes a daily controller medicine, be sure to take it every day, even when you or your child feels good

Visit our website at: www.asthma.dhh.louisiana.gov
Taking Control of Your Asthma

Good asthma control means the child being able to:

— Play and exercise when the child wants.
— Sleep through the night without cough or wheeze.
— Avoid urgent visits to the doctors and no hospitalization because of asthma.

The Asthma Action Plan —

What Does it Mean?

How the Parent, Physician and Teacher can Monitor Your Child’s Asthma.

GREEN Asthma Zone Child is Under Control
This zone means the child has no signs of asthma which includes no coughing, no wheezing, no fast breathing, and the child is playing with no problems

YELLOW Asthma Zone Follow Treatment in Asthma Action Plan
This zone means the child is having signs such as coughing, wheezing, cold symptoms, coughing at night

RED Asthma Zone SEEK EMERGENCY HELP!
This zone means medicine is not helping within 10-20 minutes, fast breathing, trouble walking & talking, lips and/or fingernails blue

If you need more information about how to obtain an Asthma Action Plan or would like to download as Asthma Action Plan for you and/or your child and your healthcare provider, please visit our web site at www.asthma.dhh.louisiana.gov
Need Help Controlling Asthma?

Asthma HELP is here when you need them.

What is Asthma HELP?
Asthma Health Education by Louisiana Pharmacists (Asthma HELP) is a FREE educational program for Louisiana Medicaid recipients with asthma. Upon referral, your patient will be assigned to one specific pharmacist who is a certified asthma educator.

If I have asthma, how can I be chosen for this free program?
To participate in this program, you must have Louisiana Medicaid and have been to the emergency room during the past 6 months because of your asthma.

How do I enroll in the Asthma HELP Program?
To enroll in this free program, please call 1-866-762-2404, or a member of our Asthma HELP team will call you with in the next few weeks to see if you would like to enroll. This program is offered as a free service to you, but you are not required to participate.

If you have any questions about this program please call toll-free: 1-866-762-2404. Ask to speak to one of the Asthma HELP pharmacists.

Asthma HELP
Health Education by Louisiana Pharmacists

Sponsored by the Louisiana Medicaid Pharmacy Benefits Management Program and the University of Louisiana at Monroe College of Pharmacy.
Spray inhaler with a tube type spacer or holding chamber

Step 1: Take off cap and Make sure opening is clean. Shake inhaler 5 seconds.

Step 2: Put inhaler into spacer.

Step 3: Breathe out all the air in your lungs.

Step 4: Put spacer in your mouth and close lips tightly around the mouthpiece. Spray one puff of medicine into the spacer.

Step 5: Start to take a slow deep breath. If you hear a whistle, breathe slower, but keep taking a deep breath. Do not breathe through your nose.

Step 6: Take the spacer out of your mouth and hold your breath. Count to 10 slowly.

Step 7: Breathe out slowly, like cooling soup on a spoon.

Best to use inhalers with a spacer. More medicine will get into the lungs and less on your tongue and throat.

Use more than 1 puff of medicine? Wait at least 30 seconds between puffs.
Using a spacer with facemask

1. Take off inhaler cap and make sure opening is clean. Shake inhaler 5 seconds.

2. Put inhaler into open end of spacer.

3. Put mask over the nose AND mouth. Press against the face gently so no air or medicine escapes.

4. Spray one puff of medicine and hold the mask in place.

5. Breathe in and out 6 times.

Best to use inhalers with a spacer.
More medicine will get into the lungs and less on your tongue and throat.

Use more than 1 puff of medicine? Wait at least 30 seconds between puffs.
Dry Powder Inhaler (DPI)

Twisthaler

Open Inhaler

1. Hold inhaler straight up with pink base on bottom.

2. Hold base and twist white cap to the left. The dose counter counts down by one as you twist off the white cap.

Inhale dose

3. Turn head and breathe out.

4. Close lips tight around the mouthpiece and take a deep, fast breath. Hold the inhaler horizontal.

5. Take inhaler out of your mouth and hold breath for 10 seconds. Replace the cap on the inhaler and twist to the right until it clicks. It must be fully closed to load the next dose.

Be sure the arrow on the cap is lined up with the dose counter on pink base.

Repeat each step every time you take a dose.
**Using Your Inhaler Medicine**

**Dry Powder Inhaler: Flexhaler**

*First time use: Prime the inhaler 2 times.*
*Do the loading steps 1, 2 and 3 below.*

<table>
<thead>
<tr>
<th>Load the dose</th>
<th>Inhale the dose</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="Image" /></td>
<td><img src="image2.png" alt="Image" /></td>
</tr>
<tr>
<td>1. Hold straight up and twist off white cap.</td>
<td>1. Turn face away and breathe out. Do not blow into the inhaler.</td>
</tr>
<tr>
<td><img src="image3.png" alt="Image" /></td>
<td>Step 1</td>
</tr>
<tr>
<td>2. Twist brown base to the right.</td>
<td>2. Put your lips around the mouthpiece. Breathe in deeply and forcefully. Hold inhaler straight up or sideways. Do not tip or you will lose dose.</td>
</tr>
<tr>
<td><img src="image4.png" alt="Image" /></td>
<td>Step 2</td>
</tr>
<tr>
<td>3. Twist brown base to the left until you hear a click.</td>
<td>3. Hold your breath a few seconds. Blow out gently.</td>
</tr>
<tr>
<td><img src="image5.png" alt="Image" /></td>
<td>Step 3</td>
</tr>
</tbody>
</table>

Inhaler is empty when the number “0” shows in the middle of the red background.

*Rinse mouth after use.*
It is best to use inhalers with a spacer. More medicine will get into the lungs and less on your tongue and throat. If you don’t use a spacer, here are 2 ways to use your inhaler.

**Spray Inhaler with Open Mouth**

1. Take off cap and make sure opening is clean. Shake 5 seconds.
2. Breathe out all the air in your lungs.
3. Hold the inhaler two finger widths away.
4. As you start to breathe in through your mouth, push down on the top of the inhaler and keep taking a slow deep breath.
5. Hold breath for 10 seconds.
6. Breathe out slowly through pursed lips (like cooling soup on a spoon.)

**Spray Inhaler in Mouth**

1. Take off cap and make sure opening is clean. Shake 5 seconds.
2. Breathe out all the air in your lungs.
3. Put inhaler in your mouth and close lips tightly around the opening of the inhaler.
4. As you start to breathe in through your mouth, push down on the top of the inhaler and keep taking a slow deep breath.
5. Hold breath for 10 seconds.
6. Breathe out slowly through pursed lips (like cooling soup on a spoon.)

*Use more than 1 puff of medicine? Wait at least 30 seconds between puffs.*
# Using Your Nebulizer Medicine

## Getting Ready

<table>
<thead>
<tr>
<th>Step 1</th>
<th>1. Put the nebulizer compressor (machine) on a hard surface and plug machine into outlet.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 2</td>
<td>2. Unscrew top of nebulizer.</td>
</tr>
<tr>
<td>Step 3</td>
<td>3. Put a dose of medicine in the nebulizer cup.</td>
</tr>
<tr>
<td>Step 4</td>
<td>4. Put top of nebulizer back on and turn until tight.</td>
</tr>
<tr>
<td>Step 5</td>
<td>5. Put mouthpiece onto nebulizer with valve facing <strong>down</strong> (outlet away from eyes).</td>
</tr>
<tr>
<td>Step 6</td>
<td>6. Press the tubing firmly to the bottom of the nebulizer.</td>
</tr>
<tr>
<td>Step 7</td>
<td>7. Attach opposite end of tubing to machine’s outlet port.</td>
</tr>
</tbody>
</table>

See other side ⇒
Using the Nebulizer

8. Turn compressor (machine) on.

Step 8

11. Use a mask if you cannot breathe through your mouth. Blowing medicine in the face is not a good way to get medicine into the lungs.

Step 11

9. Look at mouthpiece to see if there is a steady mist.

Step 9

At The End:

12. After medicine is gone, turn compressor off.

Step 12

Step 10

13. Clean nebulizer parts with hot soapy water, or vinegar and hot water.

Step 13

Tips: Do not wash tubing. Change when it looks wet or dirty.
Change filter on machine when it turns gray or looks dirty.
Rinse mouth after using inhaled steroid in nebulizer.
Using Your Inhaler Medicine

Dry Powder Inhalers (DPI)

Diskus

1. **Open**: Keep diskus level in one hand.  
   Put thumb of your other hand on grip and push away until the mouthpiece appears and snaps into place.

2. **Click**: Slide lever away from you as far as it will go until you hear or feel a "click". Hold the diskus level and do not tip or you will lose the dose.

3. **Breathe Out**: Turn face away and breathe out.  
   Do not blow into the diskus.

4. **Inhale**: Put the mouthpiece between your lips.  
   Breathe in quickly and deeply through the diskus.  
   Hold your breath for 10 seconds

5. **Close** the diskus, then blow out gently.

6. **Rinse** mouth with water, gargle and spit.  
   Do not swallow.

- Take only one breath each time.  
- The counter on the side shows how many doses are left  
  One month = 60 doses. 14 days = 28 doses

DEPARTMENT OF HEALTH AND HOSPITALS  
Asthma Management and Prevention Program
Get Ready: Get a pencil and your peak flow chart.

1. Slide the marker down as far as it will go.
   This sets the meter to zero.

2. Stand up and take a deep breath with your mouth open.
   Hold the meter. Keep your fingers away from the numbers.

3. Close your lips around the tube.
   Do not put your tongue in the hole.
   Blow one time as fast and hard as you can.

4. The marker will go up and stay up. Do not touch the marker.
   Find the number where the marker stopped.

5. Write down the number.

6. Blow 2 more times. Slide the marker down each time.
   Write the number down each time.

7. Keep the highest number on a chart. Do this for 1-2 weeks.
   Show your doctor, nurse or asthma educator.
Section II-For School Personnel

(Increasing Self Management Education for the Student in the School Setting)
WHAT TO DO DURING AN ASTHMA ATTACK

Common Symptoms of an Asthma Attack
Coughing, Chest pain or tightness, Shortness of breath or gasping for breath, Wheezing, Flushed, pale, ashen or bluish looking skin, Speaking in clipped or short bursts of speech

1. Have the athlete STOP whatever activity he/she is doing.
   < Send another player to get the parent. DO NOT leave the athlete alone.

2. Follow the athlete's Asthma Action Plan or emergency plan if there is one.

3. If the athlete has a RESCUE INHALER, have the athlete use it IMMEDIATELY.
   Generally, an athlete should:
   < Take 1 puff, hold breath for 10 seconds and exhale.
   < Wait 1-2 minutes between puffs.
   < Take another puff, hold breath for 10 seconds and exhale.

   - Have the athlete sit up and slowly breathe in through the nose and out through pursed lips.
   - Give sips of room temperature water.

4. REPEAT above steps if SYMPTOMS CONTINUE.

5. ONLY IF and WHEN symptoms are COMPLETELY gone can the athlete go back to playing.

6. IF SYMPTOMS REOCCUR after the athlete resumes playing, repeat these steps and DO NOT allow the athlete to resume playing for the remainder of the game.

CALL 911 IF:

• YOU are not sure what to do – or
• Rescue medications are not working (symptoms are getting worse, not better) or, meds are unavailable – or
• The athlete’s lips or fingernails are blue – or
• The athlete is having difficulty talking, walking, or drinking liquids – or
• The athlete’s nostrils are flaring out – or
• You see neck, throat or chest retractions – or
• The athlete is in obvious distress, there is a change in level of consciousness, or the athlete is showing signs of confusion – or
• The athlete’s condition is deteriorating.

DO NOT HESITATE TO CALL 911

Adopted from the Minnesota Department of Health Asthma Program
Know which students have asthma and know where students store their medications whether it is with the school healthcare professional, administrative office or they self carry and administer.

If a student has asthma symptoms or complaints and needs your help, take these steps:

- Quickly evaluate the situation. Call 911 if the student is struggling to breathe, talk, stay awake, has blue lips, or asks for an ambulance.
- NEVER LEAVE A STUDENT ALONE.
- Stop the student’s activity.
- Help the student locate and take his/her prescribed quick-relief inhaler medicine.
- Contact the parent/guardian.
- Repeat quick-relief inhaler medicine in 20 minutes if a student is still having trouble breathing.

Call 911 if any of the following occur:

- If the student is struggling to breathe, talk, stay awake, has blue lips, or asks for an ambulance.
- If the student doesn’t improve after two administrations of quick-relief medicine, and nurse/designee or parent/guardian is not available.
- If no quick-relief medicine is available, the student’s symptoms have not improved spontaneously, and nurse/designee or parent/guardian is not available.
- If you are unsure what to do.

Adapted from the National Asthma Education and Prevention Program
The Asthma Friendly Schools Checklist is a tool for Louisiana schools to use to improve the quality of life, health outcomes and well-being for school-age children with asthma.

<table>
<thead>
<tr>
<th>Question</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Are school buildings, grounds and vehicles 100% smoke free?</td>
<td>Louisiana Smoke-Free Air Act 815 requires that schools in Louisiana with grades pre-K through 12th must prohibit smoking on all school property. LAMP recommends and supports 100% Tobacco-Free Schools.</td>
</tr>
<tr>
<td>Are Students allowed to carry and self-administer asthma medications?</td>
<td>Louisiana Act 145 is a law that allows students in public schools to carry asthma and anaphylaxis medications in school and anytime under the care of the school that the student attends.</td>
</tr>
<tr>
<td>Does your school have a plan for teachers to handle asthma episodes?</td>
<td>The Louisiana School Asthma Management Plan can be adopted by your school district for teachers to follow in the event of an emergency and absence of the school nurse.</td>
</tr>
<tr>
<td>Do ALL students with asthma have an Asthma Action Plan on file?</td>
<td>The Louisiana Asthma Management and Prevention Program Asthma Action Plan can be utilized by the health care provider, caregiver and school staff to help manage the student’s asthma.</td>
</tr>
<tr>
<td>Is there a school nurse or unlicensed school personnel present during all school hours?</td>
<td>The school has a nurse and/or identified unlicensed school personnel assess, monitor and administer medications to students with asthma at your school. The nurse is readily available to provide guidance on issues with asthma.</td>
</tr>
<tr>
<td>Does the school nurse or other asthma expert provide education to personnel, caregivers and students?</td>
<td>The school nurse and/or identified asthma expert provides education to school personnel, caregivers, and students with asthma around asthma symptoms, triggers, treatments, asthma action plans and asthma medications.</td>
</tr>
<tr>
<td>Does the school work to increase physical activity for students with asthma?</td>
<td>Students are encouraged and allowed to fully and safely join in physical education, team sports and other extracurricular activities while having asthma medications nearby before and after activities.</td>
</tr>
<tr>
<td>Does the school have good indoor air quality?</td>
<td>The school has adopted and implemented the Louisiana’s Top Ten No or Low Cost Tools for Schools Indoor Air Quality Interventions.</td>
</tr>
</tbody>
</table>

If the answer to any question is “no,” then it may be harder for students to have good control of their asthma. Uncontrolled asthma can hinder a student’s attendance, participation and progress in school. School staff, health care providers, and families should work together to make schools more asthma-friendly to promote student health and education.

Adopted from the National Heart, Lung and Blood Institute National Asthma Education and Prevention Program.
# Teacher’s Classroom Checklist

6d. Ensured the air supply pathway is not obstructed .........................
6e. Ensured there are no vehicle exhaust, kitchen/food, and chemical odors in the classroom ......................................................
6f. Ensured there are no signs of mold or mildew (refer to Appendix H of the IAQ Reference Guide) ..................................................
6g. Determined operability of windows ...............................................

7. EDUCATIONAL SUPPLIES (Art, Science, Industrial/Vocational)

7a. Reviewed supplies and their labels ..............................................
7b. Ensured that Material Safety Data Sheets are accessible .................
7c. Developed and implemented spill clean-up procedures ..................
7d. Labeled all chemicals accurately with date of receipt/preparation and pertinent precautionary information ....................................
7e. Ensured that supplies are stored according to manufacturers’ recommendations ...........................................................
7f. Understood and followed recommended procedures for disposal of used substances ............................................................
7g. Ensured that compressed gas cylinders are stored securely ............... /i. Used diluted substances rather than concentrates, wherever possible ........
7h. Separated storage areas from main classroom area and ensured they are ventilated separately ..................................................
7j. Minimized exposure to hazardous materials (i.e., used non-hazardous materials and pre-mixed products) ......................................
7k. Ensured that fume hoods capture respirable particles, gases, and vapors released within them .................................................

8. LOCAL EXHAUST FANS

8a. Identified major pollutant-generating activities, if any ....................... 8b. Located exhaust fan(s), if any ....................................................
8c. Determined that fans operate .....................................................
8d. Ensured that adjacent rooms or halls are free of odor .....................

9. LOCKER ROOM

9a. Ensured locker room and showers are cleaned regularly and properly ...... 9b. Checked that soiled clothes are removed regularly ..........................
9c. Ensured that wet towels are removed from locker room ................
9d. Ensured that there is water in the drain trap ..................................
9e. Verified that the local exhaust fan is functioning properly and used consistently .................................................................
Protect yourself:
Take it easy, especially if you have heart or lung disease. Even if you are not in the “sensitive” category, reduce or postpone activities that lead to deep breathing.

Reduce air pollution:
- Limit driving — share a ride to work and postpone errands to the next day.
- Delay painting, use of solvents and refuel your vehicle after 8 p.m. to reduce harmful fume evaporation into the air.
- Postpone using other gasoline-powered engines like garden and recreational equipment.
- Postpone indoor and outdoor recreational fires.
- To reduce demand on power plants, turn off as many electric items as possible.

In Louisiana, two air pollutants cause concern:
Ozone (smog) forms through a chemical reaction involving hot sunshine and chemicals emitted from vehicles, power plants and industry. Ozone is a summer problem in Louisiana. Ozone causes shortness of breath, coughing, eye irritation, and aggravates asthma.

Fine particles are so tiny that it would take 50-100 of them to equal the width of a human hair! Fine particles come from cars and trucks, power plants and industry, and even fires. Fine particle pollution is linked to both heart and lung problems, and may even lead to premature death in people with cardiovascular or respiratory disease.

For instant air quality information that can protect the health of families and your students, please visit http://www.deq.louisiana.gov and subscribe to EnviroFlash.

</table>

*Individuals with asthma or other respiratory or cardiovascular conditions (or their caregivers) should be medically managing their conditions.**

Heavy exertion means any outdoor activity that you will be doing intermittently for several hours and that makes your breathing slightly harder than normal.

Prolonged exertion means any outdoor activity that you will be doing intermittently for several hours and that makes your breathing significantly harder than normal.

Periods of outdoor exercise refers to periods of intense exertion or rest periods of exercise:

- **Exercise:** Increase breathing rates.
- **Rest:** Increase resting breathing.

Limitations:

- Sensitive groups should limit prolonged or heavy outdoor exertion.
- Everyone should limit prolonged or heavy outdoor exertion.

Activities:

Scheduled Sporting Events or Outdoor Activities:

- No Limitations
- Unusually sensitive individuals should consider reducing prolonged or heavy outdoor exertion.
- Individuals with asthma or other respiratory/cardiovascular illness (or their caregivers) should be medically managing their condition.

Physical Education Class or Outdoor Activities:

- No Limitations
- Sensitive groups should limit prolonged or heavy outdoor exertion.
- Everyone should limit prolonged or heavy outdoor exertion.

Athletic Practice and Training:

- No Limitations
- Unusually sensitive individuals should consider reducing prolonged or heavy outdoor exertion.
- Individuals with asthma or other respiratory/cardiovascular conditions (or their caregivers) should be medically managing their condition.

Recess or Other Outdoor Activities:

- No Limitations
- No Limitations
- Sensitive groups should limit prolonged or heavy outdoor exertion.
- Everyone should limit prolonged or heavy outdoor exertion.

For more information, visit the US Environmental Protection Agency air quality web sites www.airnow.gov and http://www.epa.gov/airnow/aqi_brochure_08-09.pdf.
Information: www.asthma.dhh.louisiana.gov

This guidance was developed by the Louisiana Department of Health and Hospitals and the Louisiana Department of Environmental Quality. The table was adapted from the Louisiana Department of Health and Hospitals asthma program web site for Heart Disease and Stroke Prevention, from www.asthma.dhh.louisiana.gov.

The health benefits of regular physical activity are well documented. The intent of this table is to help children and adults continue to exercise while protecting their health when air quality is poor. Participation in regular physical activity promotes normal growth and development, and helps to reduce the risk of developing obesity and chronic diseases (e.g., diabetes). For more information about the importance of physical activity, visit the Centers for Disease Control and Prevention: http://www.cdc.gov/physicalactivity/. While you’re active, be sure to have a buddy who can watch for warning signs and take steps if needed to protect your health.

To receive notification of air pollution alerts:

Step 1: On Thursday afternoon, check your local enviroflash site or call the local warning system to determine if there will be any ozone or other pollution.

Step 2: If the forecast for Friday is Unhealthy for Sensitive Groups, make arrangements to have indoor space available for individuals with asthma and other respiratory diseases or cardiovascular diseases. Information about the latest changes in air quality can be accessed via the Air Quality Index (AQI). Note: Forecasted air quality conditions are based on a combination of meteorological factors, including temperature, dew point, wind speed, and air pollution concentrations. The AQI is a number scale from 0 to 500 that indicates the level of air pollution and how it may affect your health.

TO RECEIVE NOTIFICATION OF AIR POLLUTION ALERT

Outdoor air generally is much cleaner indoors than indoor air. When considering how to decide when to allow outdoor activities, it is important to use a combination of the AQI and other environmental factors to determine the level of air pollution.

HOW TO USE THIS TABLE

The AQI in air quality guidelines for schools. July 2010

Fine Particles:

Asthma is one of the most common chronic diseases in the United States, affecting more than 20 million people. It is a disorder characterized by inflammation and narrowing of the airways, which can vary from one area to another. The impact of asthma on children includes missed school days, interrupted sleep and limited physical activity. Approximately 13% of Louisiana households had a child diagnosed with asthma (LABRFSS 2009). While it cannot be cured, it can be controlled through access to medical care, medications and self-management. Visit the Louisiana Department of Health and Hospitals asthma program web site for current AQI data for up-to-date information.

During ozone air pollution action days, routine physical activities may be continued indoors because indoor ozone levels are considerably lower than outdoors. However, if the AQI has moved to Unhealthy, note that everyone is advised to limit prolonged/heavy exertion.

Please note:

The health effects of ozone exposure at various concentrations are listed below.

• Step 3: On Friday prior to class, check the current AQI. Since ozone levels can vary from one area to another, check the AQI for your area.

• Continuous exposure to ozone results in airway inflammation and can cause respiratory symptoms such as asthma symptoms and difficulty breathing. Small particles may enter deep parts of the lungs, causing the respiratory system to work harder in order to deliver oxygen. If they settle in the respiratory system, chronic effects can cause permanent lung damage.

• Ozone (Ozone (O₃)) is an invisible pollutant and strong irritant that can cause inflammation and irritation of the airways, forcing the respiratory system to work harder in order to provide oxygen. It also causes other health problems such as eye irritation.

• Fine Particles (PM-2.5) are small particles (2.5 microns and smaller) that enter the lungs and cross into the bloodstream and circulate in the body. They are particularly harmful to children and adults who are exposed to fine particles may experience respiratory symptoms such as asthma symptoms and difficulty breathing. Small particles may enter deep parts of the lungs, causing the respiratory system to work harder in order to deliver oxygen. If they settle in the respiratory system, chronic effects can cause permanent lung damage.

• Heart attacks, in adults.

• Increased risks of cardiovascular disease, such as asthma symptoms and difficulty breathing. Small particles may enter deep parts of the lungs, causing the respiratory system to work harder in order to deliver oxygen. If they settle in the respiratory system, chronic effects can cause permanent lung damage.

• Inflamed lung tissues, in children.

• Increased risk of asthma symptoms and difficulty breathing. Small particles may enter deep parts of the lungs, causing the respiratory system to work harder in order to deliver oxygen. If they settle in the respiratory system, chronic effects can cause permanent lung damage.

• Increased risk of bronchitis, in adults.

• Increased risk of heart attack, in adults.
Section III-For the School Health Professional

(Assessing and Managing Asthma in the School Setting)
Dear Dr ____________________:

The _______________________________ School of the _______________________________ school district understands that in order for your patient(s) to excel academically in our district, they must have a safe and healthy environment in which to live, learn, and play. Our school is currently working with the Louisiana Department of Health and Hospitals (DHH), Asthma Management and Prevention (LAMP) Program to decrease school absenteeism for your patient living with asthma, as well as, increase the patient’s ability to maintain and control their asthma during the school day.

In order to provide the best possible school asthma management for your patient, we request your assistance with the following:

1. Please complete the Louisiana Asthma Management and Prevention Program asthma management plan or asthma action plan provided by the school nurse to be signed by the physician, caregiver, and student.
2. Please complete the attached Medication Administration form for any medication that is administered in school, signed by your physician, to allow the student to carry and administer their asthma inhaler and epinephrine pen.
3. Maintain communication with the school nurse regarding the needs of your patient.
4. Assist the state of Louisiana Department of Health and Hospitals in connecting your Medicaid patient(s) to the University of Louisiana Asthma Help Line at 1-866-762-2404. This is a program for Medicaid enrollees which will allow your patient(s) to receive free asthma health education from Louisiana pharmacists.

We look forward to a great partnership providing care for your patient and our student.
Thank you for working with us to assist your patient.

Sincerely,

Principal/School Nurse

</tbody>
</table>

Licensed Provider’s Signature Date
A student with asthma symptoms should be placed in an area where he/she can be closely observed. Never send a student to the health room alone or leave a student alone. Limit moving a student who is in severe distress. Go to the student instead.

See list of Possible Observations/Symptoms on back.

**Immediate Assessment: Is student at high risk?**
- Marked breathlessness, inability to speak more than short phrases, use of accessory muscles, or drowsiness.
- Risk factors for a fatal attack (see back).

**Take Immediate Actions**
- Treat with inhaled SABA.
- Call 911 (student to ED)
- Contact parent/guardian.

**If available, measure PEF: Is PEF < 50% of predicted or personal best?**

**Initial Treatment**
- **Inhaled SABA:** Up to two treatments 20 minutes apart of 2–6 puffs by MDI or nebulizer treatments. Medication must be authorized by a personal physician order or standing protocol signed by the school physician or public health physician.
- Restrict physical activity. Allow student to rest.
- Administer oxygen (if appropriate and available).
- Contact parent/guardian.
- Assess response after ~ 10 minutes.

**Check and record respirations, pulse, and PEF rate.**

**Good Response**
PEF ≥80% and no wheezing or dyspnea.
**Actions:**
- Reassess after 3–4 hours.
- Follow school protocol for returning to class.

With parental permission, send a copy of the health room encounter report to the student’s physician. Obtain a personal asthma action plan.

**Incomplete Response**
PEF 50–79% or persistent wheezing or dyspnea.
**Actions:**
- Repeat inhaled SABA.
- Reassess after ~ 10 minutes.
- Call parent immediately if response remains incomplete.

**Poor Response**
PEF <50% or marked wheezing and dyspnea.
**Actions:**
- Repeat inhaled SABA.
- Call 911 (Student to ED)
- Contact parent/guardian.

**To ED**
**Possible Observations/Symptoms** (May include one or more of the following):

- Coughing, wheezing, noisy breathing, whistling in the chest.
- Difficulty or discomfort when breathing, tightness in chest, shortness of breath, chest pain, breathing hard and/or fast.
- Nasal flaring (nostril opens wide to get in more air).
- Can only speak in short phrases or not able to speak.

**Risk Factors for Death from Asthma**

**Asthma history**

- Previous severe exacerbation (e.g., intubation or ICU admission for asthma).
- Two or more hospitalizations for asthma in the past year.
- Three or more ED visits for asthma in the past year.
- Hospitalization or ED visit for asthma in the past month.
- Using >2 canisters of SABA per month.
- Difficulty perceiving asthma symptoms or severity of exacerbations.
- Other risk factors: lack of a written asthma action plan, sensitivity to Alternaria.

**Social history**

- Low socioeconomic status or inner-city residence.
- Illicit drug use.
- Major psychosocial problems.

**Comorbidities**

- Cardiovascular disease.
- Other chronic lung disease.
- Chronic psychiatric disease.
Acknowledgements

Louisiana Asthma Management and Prevention (LAMP) Program would like to acknowledge the Louisiana School Nurses Organization, Louisiana Asthma Regional Coordinators and the Louisiana Asthma Surveillance Collaborative (LASC) Healthcare Education Workgroup for providing the impetus for the establishment of the Louisiana Asthma School Toolkit. This will serve as a valuable resource for the school administrator, faculty, staff, and nurse.

Louisiana School Nurses who provided input into the contents desired for the school toolkit:
