Question #1

Currently, we own the 5220 which is no longer sold.   MCSB currently purchases year to year licensing for this product.   We have included the newer firewall (5430) and will be purchasing it within the next 5 years.

Question #2
A: Basic topology: each firewall has two 10gigabit interfaces to internal network and two 10 gigabit interfaces to the external network. All interfaces are trunk connections.

B: 4 interfaces connected an 10gig interfaces minimum requirement.

C: Firewalls are in the same rack as the external network and one rack over from internal network (approximately 10-15 feet)

D: Not fiber panels involved, direct fiber jumpers between firewall and switches.

E: Currently using SFP-10GBase-CX1

F: One Rack Unit apart in the same rack

G: Disregard .   No version 2 is needed.

Question #3

A: 83 security rules

B: 83 security rules and 46 NAT rules

C: No

D: Yes

Question #4

A: 1 Global Protect
B: Yes
C: Yes
D: No but wildfire is required
